ePACT Announces Partnership With Daxko to Support YMCA Associations

Vancouver, British Columbia - ePACT Network announces its new strategic partnership with Daxko, the leading technology solutions provider for member-based health and wellness centers, including [over 70% of all US YMCAs](#). The Daxko-ePACT partnership offers shared clients, particularly YMCAs, a comprehensive toolset to support programs throughout the year.

Bringing together Daxko's operations and financial management solutions, with ePACT's one-of-a-kind HIPAA-compliant emergency network, clients can utilize these complementary systems to significantly streamline data management, processes, and response capabilities.

Each year, [over 21 million people](#) participate in YMCA programs in the US. For decades, Ys have had to use paper forms to collect required critical data from families. This includes contact details, health data like immunizations, medical conditions or allergies, special accommodations for adaptive programs, consents, waivers, and more. This data cannot be managed in traditional operational systems due to specific data privacy and security requirements, such as HIPAA.

ePACT provides the world's only [Private Personal Emergency Record \(PPER\)](#)[™] allowing families to securely manage all their critical emergency and health data online. Families can easily and securely share their PPER with organizations, like YMCAs, replacing paper forms and ensuring data is always complete, legible, and accessible.

Organizations use ePACT to not only improve the quality of data they receive from families, and reduce time, costs and risks associated with paper forms, but also to access reports (e.g. program participants taking medications, with concussions, requiring EpiPens) and easily communicate with families and their emergency support people in the event of a crisis.

Whether taking an injured child to a hospital, managing a facility evacuation, or alerting parents of a late bus arrival from camp, ePACT ensures that the contact and medical details YMCAs need, along with one-click messaging to families, is always available. It also helps clients meet, and often exceed, compliance for licensing and government data requirements.

At initial launch of this partnership, ePACT is being promoted as a value-added service to Daxko clients. However, the two companies are working to integrate their systems, and anticipate full API data exchange in the first half of 2020, further saving time and improving processes for Y staff and families.

Christine Sommers, CEO of ePACT states, “We are thrilled to work with Daxko as a leading member-management solution in North America, particularly for YMCAs. It’s truly a perfect match to have our two systems work together to help families and organizations share data and be better connected for rec, health, and wellness programs year-round.”

About Daxko

Daxko delivers comprehensive technology solutions, payment processing, experienced services and deep insights to all kinds of member-based health and wellness centers—enterprise health clubs, tennis centers, boutique fitness studios, affiliate gyms, campus recreation facilities, integrated wellness centers, YMCAs, and JCCs. Since 1998, the company has grown to serve customers spanning 68 countries, 10,000 facilities and over 20 million members. To learn more, visit www.daxko.com.

About ePACT Network Ltd.

ePACT provides recreation organizations with an easy-to-use tool to collect and manage critical participant information, minimizing risks with HIPAA-compliance, and ensuring safe data storage. Staff run reports to identify health concerns, access records on-the-go via ePACT’s Mobile App, and archive records to meet legal retention requirements.
